Sanctum of Neurology

User Manual for Residents

Prepared for neurology residents (clinical workflow edition)
Version 0.48 · 1 November 2026

1. Overview and Clinical Utility

Name and purpose

Sanctum of Neurology is an offline-first neurology lexicon for quick bedside reference and structured self-study. It contains more than 2,500 diseases and 760 neurological signs with definitions, localisation, key investigations, in-depth summaries, invented teaching cases, board-style questions, differentials and source references. It runs in any browser and can be installed on a phone or computer. **It is a reference and learning tool; it does not store patient data and does not replace clinical judgement.**

Key features for residents

> **Time saving** — One search box covers diseases, signs and synonyms; the Auto-summary gives best match, differential and first tests in one card.

> **Error reduction** — Side-by-side Compare and “how to tell apart” lines address commonly confused pairs; every page lists its sources and shows a Draft badge until reviewed.

> **Works on the ward** — Offline after installation; fast on a phone; keyboard shortcuts on a workstation.

> **Structured learning** — Cloze it, Gush! flash cards, Quiz and Board MCQ turn the same content into active recall.

> **Privacy by design** — No patient registration or ordering: saved items and history remain on the device.

Scope note

Patient registration, orders and results are not functions of this program. Sections below are therefore organised by the resident’s workflow of looking up, reading, comparing and revising, with patient-safety cautions for each step.

2. Workflow-based Step-by-Step Guide with Screenshots

A. Looking up a diagnosis or sign at the bedside / ER

Use Search when a finding, syndrome or drug question arises on the ward or in the emergency room. The search box covers 2,500+ diseases and 760+ signs, including synonyms.

Steps

1. Open **Search** (bottom bar). On a keyboard press `/` to jump to the search box.
2. Type a finding, sign or disease (e.g. “cancer stroke”). Results appear as you type; synonyms are matched.
3. Read the **Auto-summary** card first: best match, localisation, group, “Also consider” list, first tests and references.
4. Open the best match by tapping its name, or use `↓`/`↑` and `Enter` to open a result. `Esc` clears the search.
5. Use the **Back** arrow (or `Alt`+`←`) to return to the previous page.

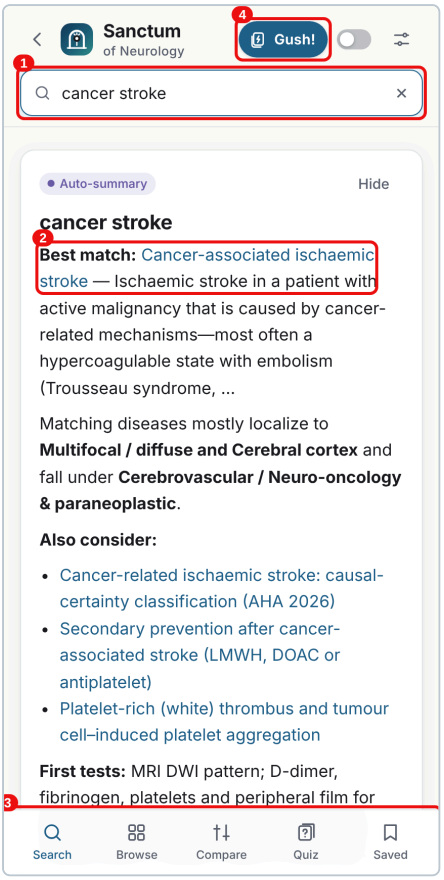

Figure 1 — Search

1. Search box with the typed query
2. “Best match” link in the Auto-summary card
3. Bottom navigation bar (Search, Browse, Compare, Quiz, Saved)
4. Gush! flash-card button

[CLINICAL TIP]
Search by finding rather than diagnosis when the diagnosis is not yet clear (e.g. “ptosis miosis”); the “Also consider” list gives a short differential in one glance.

[CAUTION]
The summary is generated from the lexicon and is educational. It is not a diagnostic tool; confirm against the patient, local protocols and the attending’s decision.

B. Reading a disease page

Every disease page follows the same layout so that key information can be found in seconds.

Steps

1. Check the header badges: **curated** (written and reviewed in the project), **Draft · date** (content awaiting expert review) and the green deep-content badge when In depth material exists.
2. Choose the definition style: **Formal**, **Simple** or **ไทย** (Thai summary).
3. Use the jump bar to move between **At a glance, Features, Tests, In depth, Case, Questions, Differential, Similar, Signs** and **Read**.
4. Open **In depth** for pathophysiology, clinical picture, diagnosis, treatment, prognosis and pearls.
5. Use **Save** to bookmark the page, **Compare** to add it to the comparison tray, and **Copy name** to paste the exact name into notes or a referral.

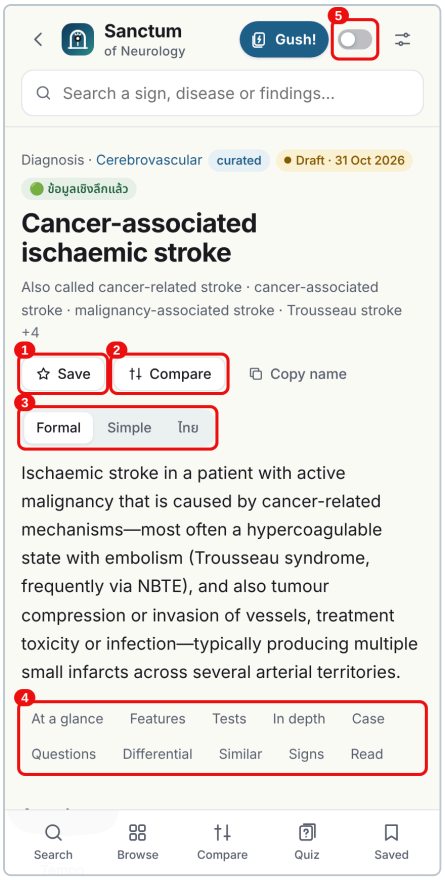

Figure 2 — Disease page header

1. Save
2. Compare
3. Formal / Simple / ไทย definition switch
4. Jump bar to sections
5. Cloze it switch (see section D)

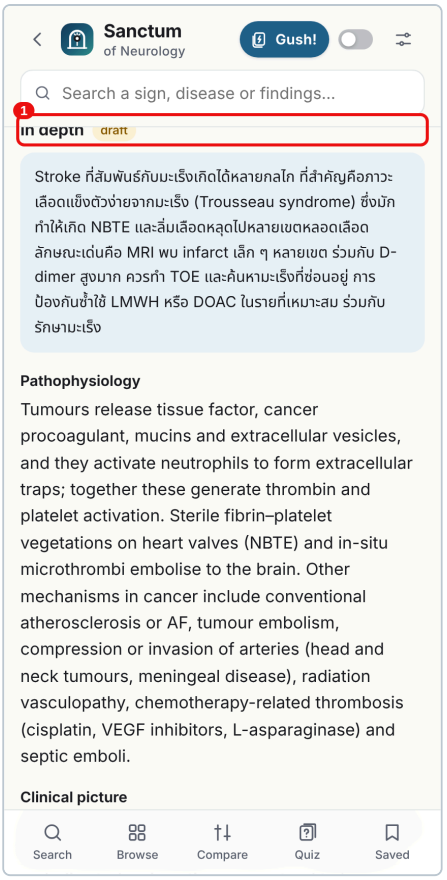

Figure 3 — In depth section

1. "In depth" heading with Thai summary and expandable clinical sub-sections

> **[CLINICAL TIP]**
> For a rapid ward check read only **At a glance → Key investigations → Treatment**; return to In depth after the shift.

> **[CAUTION]**
> Treatment sections summarise published sources and may include items flagged for expert review. Verify doses, contraindications and local formulary before acting; always read the "Draft" badge as "not yet signed off".

C. Teaching cases and board-style questions

Each curated page carries an invented teaching case and board-style questions so that learning can be done on the same page as the reference.

Steps

1. Jump to **Case**. Read the patient, story, examination and tests.
2. Answer the question silently, then tap **Show answer** to compare.
3. Jump to **Questions** and choose an option; the answer and explanation appear after you commit.

4. Use **Differential** to see how the page's disease is told apart from look-alikes; tap **Compare** in a row to open them side by side.

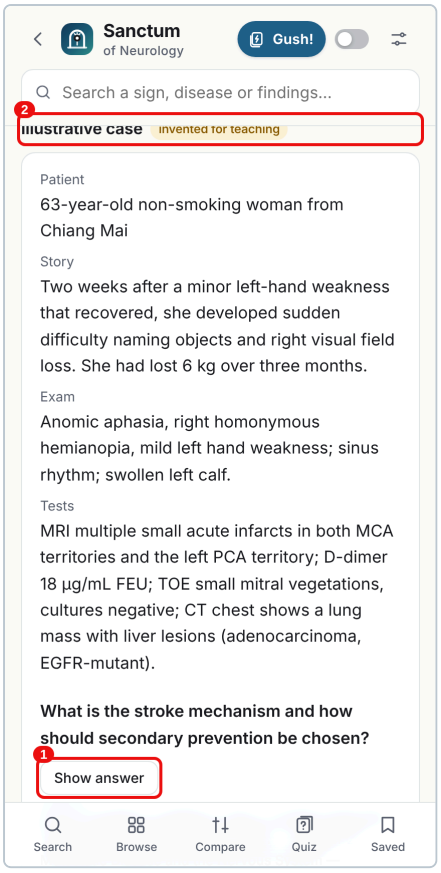

Figure 4 — Case before answer

1. "Show answer" button
2. Case heading

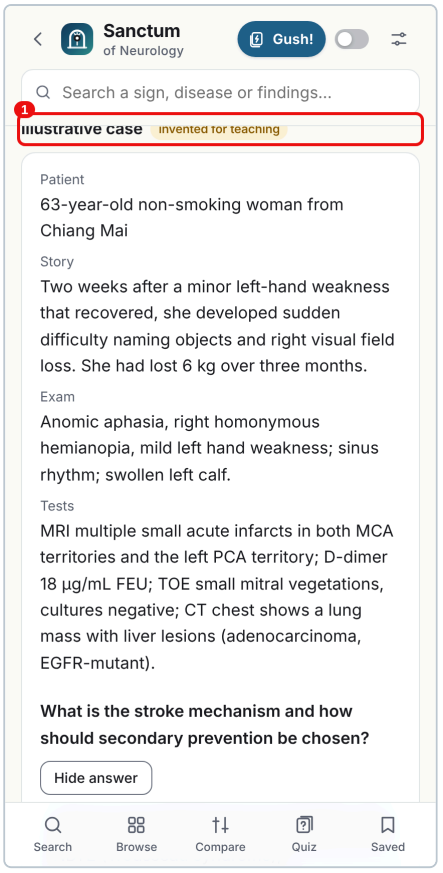

Figure 5 — Case with answer shown

1. Case heading; the button now reads "Hide answer"

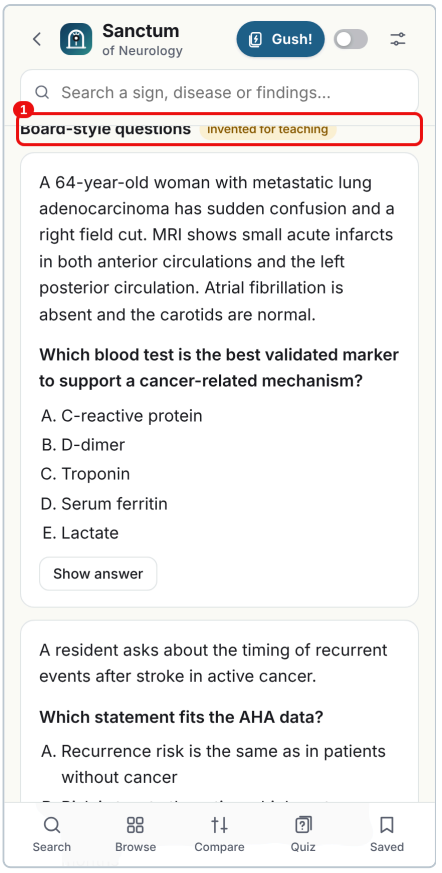

Figure 6 — Board-style questions

1. Questions heading and multiple-choice options

> **[CLINICAL TIP]**
> Do one case per page during idle ward time; five minutes per case is enough for retention when combined with Cloze it.

> **[CAUTION]**
> All patients are fictional and written for teaching. Do not copy case details into clinical records.

D. Active recall: Cloze it, Gush! and Quiz

Three tools convert reading into recall practice. Use them for exam preparation and for consolidating what was seen on rounds.

Steps

1. **Cloze it**: switch on the toggle in the top bar. Key words on disease and sign pages are hidden; tap a blank to reveal it. Use **Reveal all** / **Hide all** on the progress bar.
2. **Gush!**: tap the Gush! button, choose card types (Diseases, Signs, Case quiz, Neuroscience) and tap **Start Gush!**. Tap a card to flip it and swipe up for the next one. Cards you are unsure of return sooner; a break point appears every 25 cards.
3. **Quiz**: open the Quiz tab and choose **Flashcards**, **Quiz** or **Board MCQ**; filter by group with the selector.

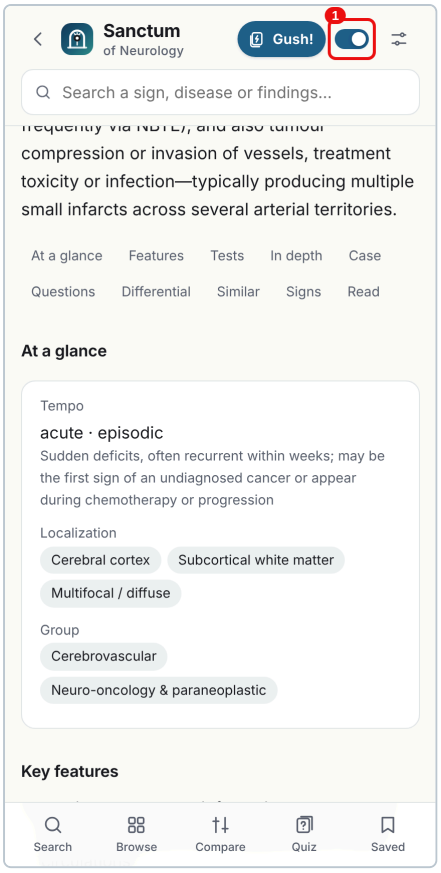

Figure 7 — Cloze it on

1. Cloze it switch (on) and blanks in the text

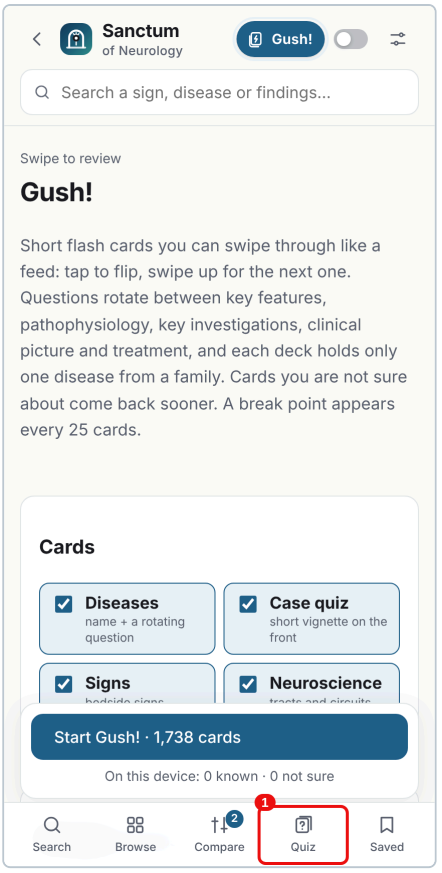

Figure 8 — Gush! set-up

Card-type tick boxes and the “Start Gush!” button (no red marks needed)

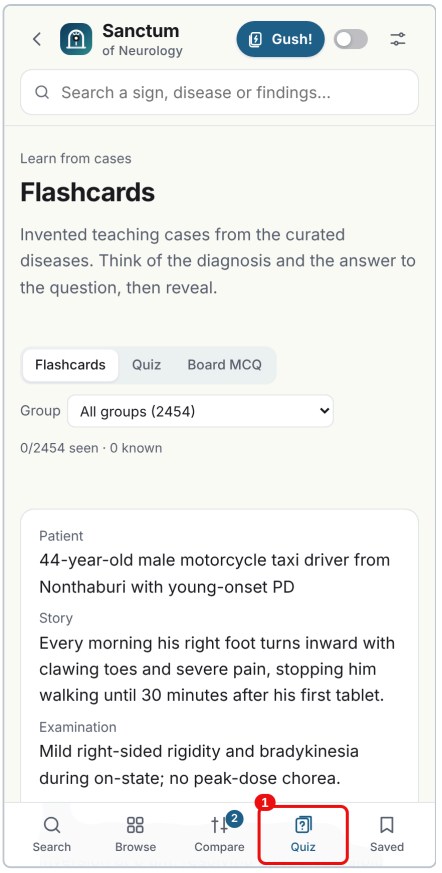

Figure 9 — Quiz tab

1. Quiz tab in the bottom bar; Flashcards / Quiz / Board MCQ selector below the title

[CLINICAL TIP]
Turn Cloze it on before reading the page of a patient you just admitted: reading with blanks exposes what you cannot yet recall.

[CAUTION]
Remember to switch Cloze it off before using a page for patient care; hidden words can be mistaken for missing content.

E. Comparing look-alike diagnoses

Compare places two or more entries in parallel columns so that distinguishing features can be read across.

Steps

1. On a disease page tap **Compare** (a counter appears on the Compare tab).
2. Open a second disease and tap **Compare** again, or choose a look-alike from the suggested list or the search field on the Compare page.
3. Open the **Compare** tab and read across rows (definition, features, tests, treatment); the first selected entry is the reference column.

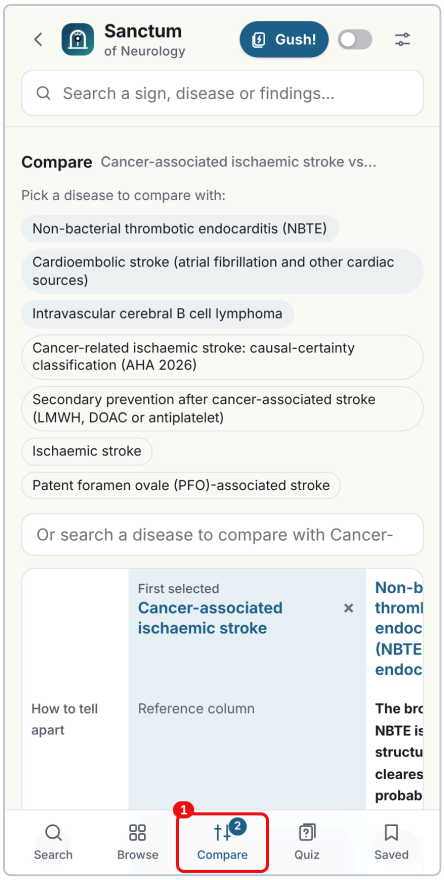

Figure 10 — Compare tab

1. Compare tab with entry counter

> **[CLINICAL TIP]**
> Start from the differential list on the page: its “how to tell apart” lines are written for the pairs most often confused.

> **[CAUTION]**
> Compare shows differences in typical presentations; atypical cases may not follow the table. Re-check the patient’s own findings.

F. Browsing, “Shadow a book” and recently added content

Browse is for systematic revision by anatomy, tempo or group; Shadow a book maps the lexicon onto the textbook you are reading.

Steps

1. Open **Browse** and choose a mode: By group, By localization, By tempo, Diseases A–Z, Signs A–Z, Biomarkers, Pathogens, Neuroscience, Curated or Status.
2. For **Shadow a book**, choose the button at the end of the mode bar, search for a reference book and select it. Pages that cite the book are grouped by the chapter or case they point to.
3. Read the textbook chapter and use the grouped list as a companion index. Multi-case citations are split so each case is its own group.
4. Open **Settings → Recently added** to see the diseases added in the last rounds with a one-line scope for each.

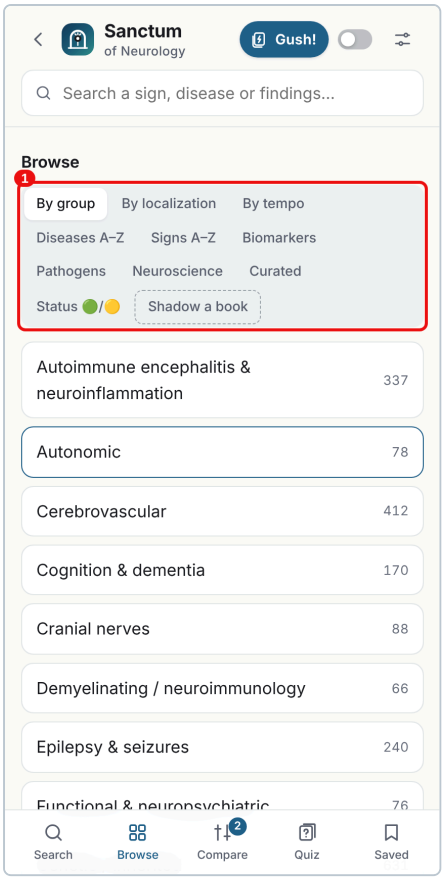

Figure 11 — Browse

1. Browse mode bar

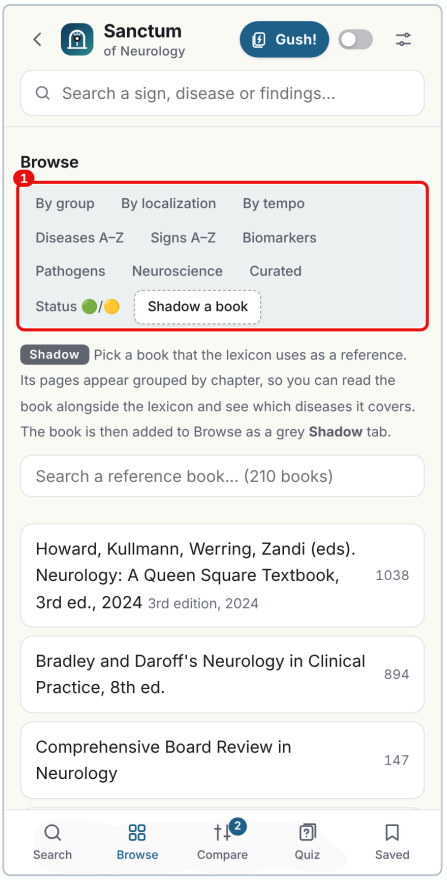

Figure 12 — Shadow a book

1. Mode bar including “Shadow a book”; list of reference books with page counts

> **[CLINICAL TIP]**
> Browse by **tempo** (acute, subacute, chronic) when preparing for night shifts: acute lists give the short list of time-critical entities.

> **[CAUTION]**
> A reference being listed means the lexicon used the book as a reading source; it does not mean the page reproduces the book. Always cite the original text.

G. Saved items, history, updates and offline use

Saved items and history stay on the device you use; no patient data is entered or stored by the program.

Steps

1. Tap **Save** on any page; find it later under the **Saved** tab. **History** lists recently opened pages; use **Clear history** to empty it.
2. Open **Settings** (sliders icon, top right) to switch appearance (System / Light / Dark) and the default definition style.
3. Under **Lexicon updates** tap **Check for updates** when you have a connection; the app then works offline with the copy on the device.
4. Under **Install for offline use** choose **How to install** and follow the instructions for your phone or computer.

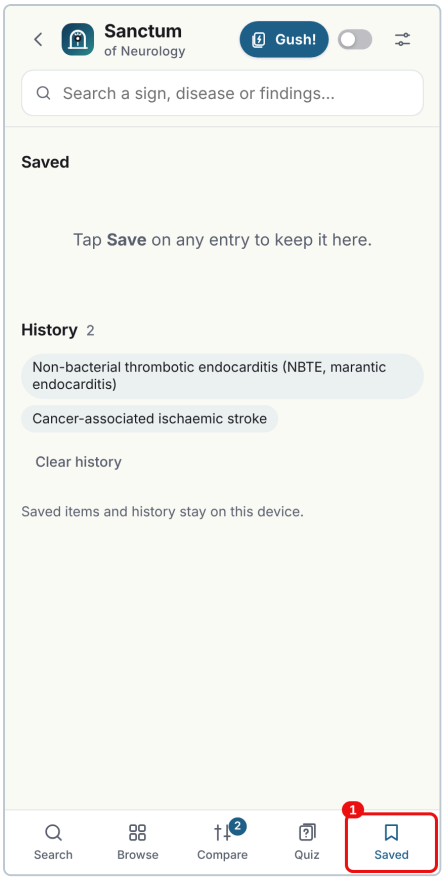

Figure 13 — Saved and History

1. Saved tab

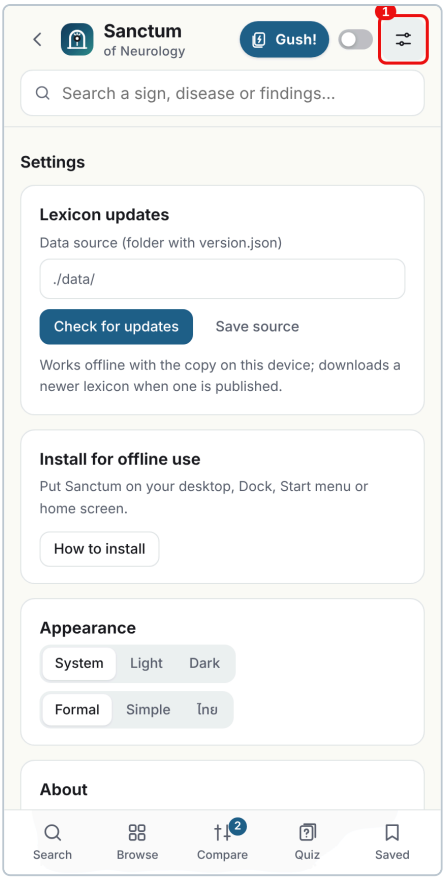

Figure 14 — Settings

1. Settings icon (top right); Lexicon updates, Install and Appearance cards

> **[CLINICAL TIP]**
> Install the app to the home screen of your phone and run “Check for updates” once a week on Wi-Fi.

> **[CAUTION]**
> Saved items are stored only on this device and are lost if the browser data is cleared or the app is reinstalled. Do not store patient identifiers in any note field.

3. Quick Reference Table for Rounding

Feature / Command	Main function	Button or shortcut
Search	Find a disease, sign or finding	Search tab; `/` on keyboard; `Enter` opens top result; `Esc` clears
Auto-summary	Best match, localisation, “Also consider”, first tests	Top card on the results page; **Hide** to collapse
Definition style	Switch Formal / Simple / Thai summary	Segmented switch under the page title
Jump bar	Move to Features, Tests, In depth, Case, Questions, Differential, Read	Row of section buttons below the definition
Save / Copy name	Bookmark a page; copy the exact name	**Save**, **Copy name** buttons on the page
Compare	Place look-alike diagnoses side by side	**Compare** button on a page, then Compare tab
Cloze it	Hide key words for recall practice	Switch in the top bar; tap a blank to reveal
Gush!	Swipe flash cards (diseases, signs, cases, neuroscience)	Gush! button, top bar → Start Gush!
Quiz	Flashcards, Quiz or Board MCQ by group	Quiz tab
Browse / Shadow a book	Systematic revision; textbook companion index	Browse tab → mode bar → Shadow a book
Back / Forward	Navigate between pages	Arrows at top left; `Alt`+`←` / `→`
Settings / Updates	Appearance, check for updates, install	Sliders icon, top right

Disclaimer — Content is educational and partly marked Draft pending expert review. Statements flagged by the authors as general knowledge have not been checked against the cited texts. Verify doses, contraindications and institutional protocols before any clinical decision. Cases are fictional.
